- Developed frontend components for various projects using React.js.
- Implemented template built-in jQuery for specific projects requiring its functionality.
- Leveraged PrimeReact component library to create usable tables within ERB systems.
- Worked with JSON data to dynamically render content and enhance user interactions.
- Collaborated remotely with team members to ensure smooth integration of frontend and backend functionalities.
- Focused on optimizing performance and enhancing user experience.

### PROJECTS

#### Library app

The library app is an innovative platform that utilizes cutting-edge web technologies such as HTML5, CSS3, Tailwind, Redux, JSON, and React.js. It serves as a comprehensive collection of Arabic and international electronic books, offering a vast array of titles across various fields in convenient PDF format. This app not only provides users with access to an extensive selection of books but also empowers administrators to publish new books on the internet. In essence, it functions as a digital publishing house, enabling seamless dissemination of knowledge and fostering a thriving online reading community.

#### Notes app

The Notes app is a web application built using HTML5, CSS3, Bootstrap, Context, JSON, and React.js. It provides users with a convenient way to create and manage their notes. Users can add, edit, and delete notes. The Notes app delivers a seamless and efficient note-taking experience.

#### Yummy

Yummy is a web application developed using HTML5, CSS3, Bootstrap, JavaScript ES6, JSON, and jQuery. It's a beautiful write-up and health factory in 2010. Offering a wide range of recipes, organized by categories such as type of cuisine, dietary restrictions, country, and catering. You can browse dishes by main ingredient or view and display catalog and group lists. Yummy has a visually appealing interface, improved usability, and improved functionality in finding new sources
